Customer Reviews

This review is based on a superficial comparison of the 3rd edition from 2012 and the 5th edition from 2014. While I am into guns on an interest level, and find the whole database entertaining and useful, I personally only shoot firearms on occasion. I'm an air rifle guy, and was flabbergasted just to see such an extensive database of air rifles being part of the database. It had serious shortcomings, though; wrinkles which I counted on being ironed out two editions and considerable time later. Sadly, this was not to be the case. While much content has been added, the flaws of previous editions have not been properly addressed. First, there's a number of double, triple and quadruple entries on the same gun, which is not necessarily a bad thing in itself. Sometimes there will be different versions of the same model, with one being so different from the other that it deserves a separate entry. However, I've come across several instances in which no such excuse can be made. If a certain model comes with several different barrel lengths, with everything else

being identical, does that really warrant several entries on the otherwise exact same gun? - Not in my opinion. And not in the author's opinion either, it seems: Many guns are indeed listed with only one entry per model, while information on what lengths, etc. are available is found on that gun's info page. That seems to me like the proper way to do this. While I can understand that keeping track of tens of thousands of entries is not an easy task, I would expect this issue to come up and be dealt with during quality control. Quality control does seem to be the issue here.
