## Customer Reviews

This book had a lot of potential - great spinning teacher, big publisher, professional layout and photographer - but the execution leaves a lot to be desired. The overall impression I had was that of a spinning class for beginners where the teacher says "Spinning is a great hobby, you can do this, and this, and this, and this, it's really great - well, sorry, I don't have the time to explain HOW you do it, but you'll figure it out". There's supposedly a little bit of everything, but for a beginner the explanations are just not detailed enough (and even for me, with some years of experience, the "rainbow pot" didn't work out). Now, that's just the general impression, but there's also a number of specific points to criticize. First of all, pictures are not very good. The "closeup" shots of yarn and

fibre are not close enough and the pictures don't always go very well with the text: The different types of spinning wheel (bobbin-lead, scotch tension, double drive) are illustrated with full frontal shots of the wheels - you can see pedals and drivewheel, but not even guess how drive band and brake band are running - which is the only important thing. The only picture (in this chapter) that does show the drive/brake band arrangement is that of a scotch tension wheel right next to the headline "bobbin-driven wheels". Page 77: "The hooks on most flyers are offset, which makes it easier to fill the bobbins evenly. You move the yarn from the hood on the right side to the hook on the left side, from one end of the flyer to the other" - for that to work the hooks need to be on opposite sides of the flyer arms (so that both rows of hooks are visible - or invisible - at the same time when the flyer is horizontal) and this is NOT the case on the wheel that's shown on this page.
